## SECURING ACCESS TO THE BUILDING

Making sure that only the employees, students and authorized visitors have access to the building can be a challenge. With many convenient features, RBH access control products make it easy to provide security and control for even the most challenging sites.

### Visual Verification

As people use cards or transmitters RBH software can pull up a picture on file of a person assigned to that card.

- Added security – address stolen card issues
- Train your personnel to recognize students and staff visually

### Email/Text Message Notification

Someone's card is not working, or a door is left propped open – know about it instantly with the help of a cell phone, tablet or a computer.

### Photo ID

Create graphic IDs for your students and employees as well as visitor cards for temporary access. Just add a camera and a printer.

### Access to the Building

Getting into a building should be a simple experience for authorized people: administration, staff, students and visitors can be covered:

- Proximity key tags (fobs) and cards
- Adhesive proximity labels for cell phones
- In addition, you can use: code keypads, fingerprint readers and many other technologies supported by RBH

### High Security Mode during an Increased Threat Level

Lock Down a single door, a group of doors, or all doors site-wide, allowing only specialized personnel with High Security Mode enabled on their card to go in and out. High security mode can be enabled at the door, via a panic button, or through the Integra32 Software.

### Video Integration

Pop up live video automatically, for example –someone's card is not working, verify their identity and then open the door. Automate event review – history reports are linked to recorded video

### Video history trail

Every event (door opening, door open too long, etc.) can generate a video pop-up or a single click playback of the event when integrated with a Digital Video Recorder (DVR) or an Network Video Recorder (NVR)

### Event driven video integration

- Link door activity to specific cameras
- Use your CCTV system as a door bell
- Automate event playback

## CONTROL ACCESS TO CLASSROOMS AND OFFICES

Once on site, security issues can arise almost anywhere. To address them proactively, it is important to set up appropriate access and monitoring policies, and ensure easy access to reporting and playback for speedy investigations

### Control at the Door

Delivery, a special event, cleaning or remodeling of a common area, changes to lock/unlock and lock out functions are normally controlled from a computer, requiring management to be on site. RBH allows this control at the door and by specifically designated people:

#### With proximity or fingerprint readers:

- 2-Swipe – present your card or finger twice in a row and lock-unlock doors as needed for deliveries and special events for example. Need to lock gym before it is scheduled to lock automatically? – Double swipe!
- 4-Swipe - present your card or finger 4 times in a row and lock residents out of an area with wet floors or unsafe conditions. Another 4-swipe and everything goes back to normal mode of operation.
- 3, 5-swipe – automate anything: unlock all elevator floors, turn on/off lights or equipment, and an uncoupled number of other options are at your command

#### With proximity reader with built in keypad:

Swipe your valid card or enter your security PIN, followed by an action code – depending which code you use, a specific command will be issued. You can do anything covered by 2,3,4,5-swipe functions.

### Different access levels for different users

Not every user needs to have access to every area of your facility. Set up access levels to allow only the users that need to be there, when they need to be there.

- Set who is allowed to go where and when
- Have an audit trail
- Link it to video recording for easy incident investigations

### Web Based Management

Direct control by administration via Web browser (Safari, IE, Firefox, Chrome and many others)

Create limited accounts for site management use:

- Add / delete cards
- Change access and unlocking schedules
- Produce reports
- Override doors remotely

### Event Log

Know who was where and when, flexible history reports make it easy

- Students entering and exiting the school property are monitored.
- All doors have high security locks or electronic access control units. This applies especially to closets that have private information or hazardous materials, outside doors, and basements.

- Identification badges, office keys, and codes are protected, and a process for reporting lost or missing badges and keys is in place.
- A formal document destruction policy defines when documents should be destroyed and how. Off-site destruction services should not be used for the most sensitive documents.

# Moving up market with AxiomV

Though features outlined on pages 2 and 3 are covered by the RBH Integra32 Security Management System, additional features are available by upgrading to the RBH AxiomV Security Management System.

## Multi-site Systems with Both Central and Local Management

Manage Multiple Schools from a Board of Education central office to reduce local on-site presence or just add a fall back option for added security.

- Global access and management from main office
- Local management access restricted to people and equipment on designated site only
- Access to high end features even at small sites: software package is shared, reducing initial costs

## Additional Parking Controls

- Counting of available parking spots, "Full" sign operation
- Allow only a limited number of parking uses

## Visitor Management

- Seamlessly integrate with popular EasyLobby visitor management system
- Use built in optional functionality

## Mapping

- Control doors and monitor alarms directly from the map
- Touch screen compatible

## Web Based Management

Direct control by administration via Web browser (Safari, IE, Firefox, Chrome and many others)

Create limited accounts for site management use:

- Add / delete cards
- Change access and unlocking schedules
- Produce reports
- Override doors remotely
