# SECURING ACCESS TO THE SITE

Making sure that only the residents and authorized visitors have access to the site and buildings can be a challenge. With many convenient features, RBH access control products make it easy to provide security and control for even the most challenging sites

## Visual Verification

As people use cards or transmitters RBH software can pull up a picture on file of a person assigned to that card.

- Added security – address stolen card issues
- Train your personnel to recognize residents visually
- Help with greeting

## Email/Text Message Notification

Someone's card is not working, or a door is left propped open – know about it instantly with the help of a cell phone, tablet or a computer.

## Access to the Building

Getting in to the lobby should be a simple experience for authorized people: residents, visitors, house help and contractors can be covered:

- Mobile Phone entry with RBH Blueline Readers
- Proximity key tags (fobs) and cards
- Proximity enabled car transmitters
- Adhesive proximity labels for cell phones
- In addition, you can use: code keypads, fingerprint readers and many other technologies supported by RBH

## Video Integration - RBH View VMS

Pop up live video automatically, for example –someone's card is not working, verify their identity and then open the door. Automate event review – history reports are linked to recorded video

## Video history trail

Every event (door opening, door open too long, etc.) can generate a video pop-up or a single click playback of the event when integrated with a Digital Video Recorder (DVR) or an Network Video Recorder (NVR)

## Event driven video integration

- Link door activity to specific cameras
- Use your CCTV system as a door bell
- Automate event playback

## Photo ID

Create graphic IDs for your employees as well as membership cards for recreational facility access. Just add a camera and a printer.

## Gate

RBH Access controllers work with a wide range of devices to best fit your needs to control access of authorized vehicles.

- RBH smart phone BLE Bluetooth app provides up to 30 foot range
- Uniquely coded two or four button transmitters (clickers), allow secure encrypted transmissions for up to 100 feet
- Long Range readers for passive vehicle tags (windshield stickers, license plate bars, etc.) with a range up to 15 feet
- Medium and short range proximity readers for cards or key tags requires the driver to open the vehicle window , range limited to 3 to 24 inches
- Other technologies supported; bar code scanners, license plate recognition, keypads, etc.

# CONTROL ACCESS TO BUILDINGS AND ELEVATORS

Once on site, security issues can arise almost anywhere. To address them proactively, it is important to set up appropriate access and monitoring policies, and ensure easy access to reporting and playback for speedy investigations

## Elevator Control

Control the floors in which employees only will be allowed to travel to via the elevator. Multiple configurations are available:

- **Best** – Full multi-floor control: certain floor buttons are available for selection after the card is swiped or a code is entered
- **Good** – Direct floor selection: a person will be taken directly to the floor they are assigned to after the card is swiped or a code is entered
- **OK** – Call control: need to use a card to call the elevator, once inside, select any floor without restriction

## Control at the Door

Delivery, a special event, cleaning or remodeling of a common area, changes to lock/unlock and lock out functions are normally controlled from a computer, requiring management to be on site. RBH allows this control at the door and by specifically designated people:

## With proximity or fingerprint readers:

- 2-Swipe – present your card or finger twice in a row and lock-unlock doors as needed for deliveries and special events for example. Need to lock gym before it is scheduled to lock automatically? – Double swipe!
- 4-Swipe - present your card or finger 4 times in a row and lock residents out of an area with wet floors or unsafe conditions. Another 4-swipe and everything goes back to normal mode of operation.
- 3, 5-swipe – automate anything: unlock all elevator floors, turn on/off lights or equipment, and an uncounted number of other options are at your command

## With proximity reader with built in keypad:

Swipe your valid card or enter your security PIN, followed by an action code – depending which code you use as specific command will be issued. You can do anything covered by 2,3,4,5-swipe functions.

## Access to Recreational Facilities and Utility Spaces

Gym, pool, storage, laundry or recycling rooms are places where incidents may happen. Wouldn't it be nice to control who goes where and when, or suspend certain access privileges from people who abuse the facilities or do not pay for their use?

- Set who is allowed to go where and when
- Have an audit trail
- Link it to video recording for easy incident investigations

## Disposable Codes

Create a single use or a single/multi-day code that can be given to delivery or other contractors.

- No need for keys
- Can't forget to return them
- Audit trail of use
- Limiting permitted hours of work

## Event Log

Know who was where and when, flexible history reports make it easy

# Moving up market with AxiomV

Though features outlined on pages 2 and 3 are covered by the RBH Integra32 Security Management System, additional features are available by upgrading to the RBH AxiomV Security Management System.

## Multi-site Systems with Both Central and Local Management

Managing multiple sites? Want to reduce local on-site presence or just add a fall back option for customer service and added security? Combine your properties with AxiomV based command center or make it an accessible tool for central office staff

- Global access and management from main office
- Local management access restricted to people and equipment on designated site only
- Access to high end features even at small sites: software package is shared, reducing initial costs

## Web Based Management

Direct control by residents/association administration via Web browser (Safari, IE, Firefox, Chrome and many others)

- Create limited accounts for individual residents to administer their visitor and contractor cards/codes
- Create limited accounts for association or property management use:
  - Add / delete cards
  - Change access and unlocking schedules
  - Produce reports
  - Override doors remotely

## Additional Parking Controls

- Counting of available parking spots, "Full" sign operation
- Allow only a limited number of parking uses
- Link privileges to rent or dues status

## Mapping

Helps security contractors to familiarize themselves with your system quicker

- Control doors and monitor alarms directly from the map
- Touch screen compatible

## Security, Emergency Call and Access Control for Suites

RBH SafeSuite alarm keypad system adds premium services to residents:

- Intrusion and Emergency call alarms can be monitored locally or remotely.
- Convenient LCD messaging selectively or globally for parcel pickup or service announcements. Each message can be audited and time stamped when the occupant acknowledged the message.
- Convenient Elevator Recall for the suite from the occupants keypad.
- Occupants can open common access points for visitors while talking on their cell phones.

## Visitor Management

- Seamlessly integrate with popular EasyLobby visitor management system
- Use built in optional functionality
