# What is OPC?

The acronym "OPC" comes from "OLE (Object Linking and Embedding) for Process Control. The OPC module is an add-on to the AxiomXa platform that allows third party software using the OPC compliant protocol standard to connect to AxiomXa. This universal connection allows any third party the ability to perform complete monitoring of AxiomXa and Control any AxiomXa device including Access Points, Inputs and Outputs.

## Why should you use OPC?

OPC provides multiple applications for security, building automation, and people management, offering real-time information in a consistent manner. This facilitates multi-vendor interoperability and "plug and play" connectivity, creating a harmonious and symbiotic relationship within a building, resulting in genuine and advantageous efficiency.

## OPC Benefits

OPC removes barriers seen in proprietary systems allowing a reduction in installation and inter-operability costs.

## AxiomXa and OPC

The AxiomXa OPC add on module seamlessly installs in seconds on your AxiomXa server. Just point the OPC client to the AxiomXa OPC server and it's ready to save you time and money!
