AxiomV SQL ™ Technical Bulletin

2 Automatic Road, Suite 108
Brampton, Ontario
Canada   L6S 6K8

Number: 37   **AxiomV™ Upgrade from AxiomIII™ 3.8**

🖉 **Although both systems use the same hardware, there are major differences between the two. AxiomV™ handles some thing differently then AxiomIII™, and therefore some things do not transfer over when upgrading from AxiomIII™ to AxiomV™. These items will have to be entered manually.**

1. **History files**

2. **Operators and Operator Profiles**

3. **Badge Templates and Signatures (for badging)**

4. **Maps**

5. **Alarm Monitoring**

6. **ASCII messages and Message Ports**

🖉 **A firmware upgrade will be required for the system to function correctly. If the original firmware chips are not flash chips then the NC100 will likely need to be modified to handle flash chips.**
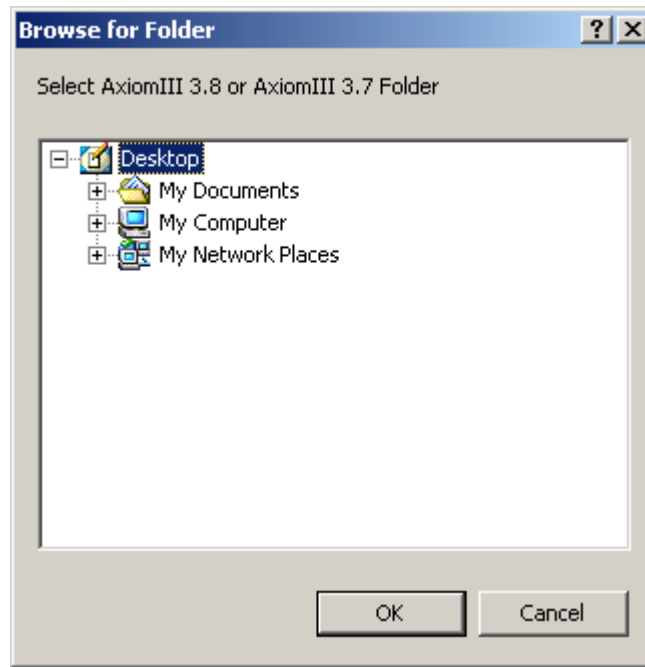

AxiomV™ Server Upgrade

You can upgrade AxiomIII™ r3.8 to AxiomV™ on the same PC where you are currently running AxiomIII™ r3.8 or on another PC.

The PC on which AxiomV™ upgrade is to run needs Microsoft Access 97 drivers. In case you do not want to install Microsoft Access 97 on your PC, you can install & then uninstall AxiomIII™ r3.8 from your older AxiomIII™ r3.8 CD. This will keep the necessary drivers required for AxiomV™ upgrade on your PC.
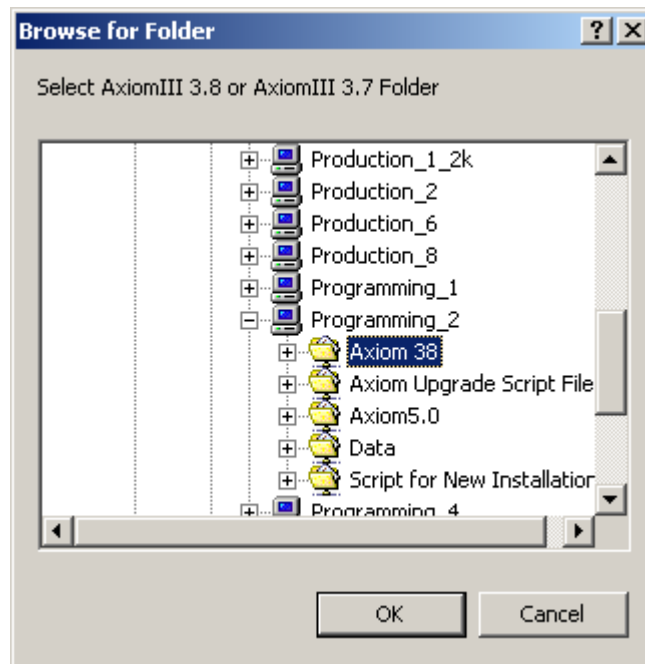

Upgrade from AxiomIII™ 3.8 to AxiomV on a New PC

1. Install AxiomV™ as per the document *TB35_AxiomVInstallation* for the Enterprise version or *TB49_AxiomV Install-Uninstall* for the Professional version*.* If you are installing the Enterprise version be sure to select the *Create New Database* option when you install Data Server.
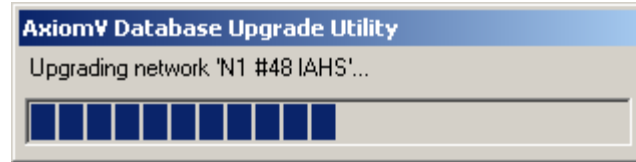

2. Copy DBUpd50.exe from the upgrade folder of your AxiomV CD to your local machine.
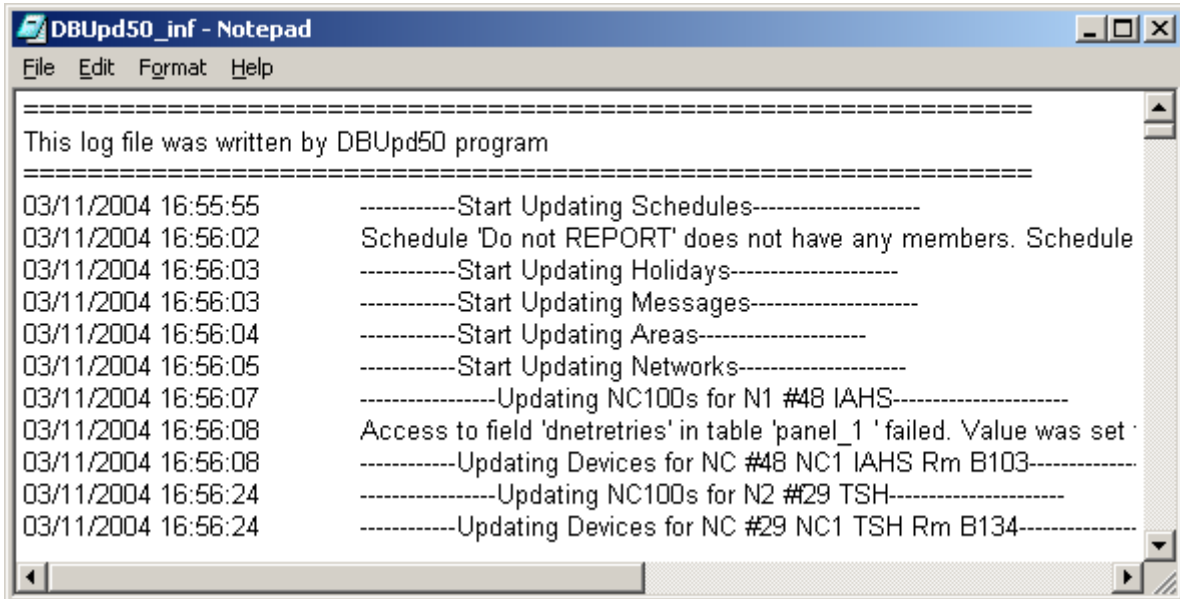

3. Run DBUpd50.exe.

4. Select the path of your AxiomIII™ 3.8 folder.

5. Click *OK* and it will start upgrading AxiomIII™ 3.8 to AxiomV

AxiomV Database Upgrade Utility

Upgrading network 'N1 #48 IAHS'...

6. As the upgrade finishes, it will log a text file indicating all the upgrade messages as well as error messages, if any.
