

AxiomV™ SOFTWARE MODULES

Multi-Brand CCTV Integration

AxiomV Multi-Brand CCTV Integration

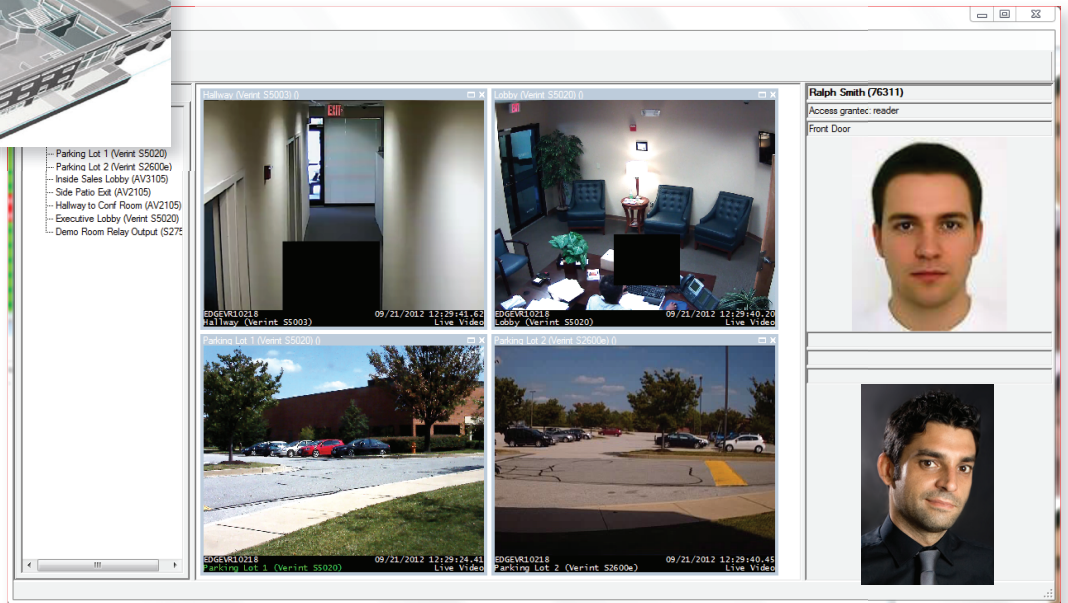

Integration capabilities of our sophisticated Access Control and Security Management Systems are further extended through an open architecture interface with a wide range of Video Surveillance Systems.

Supporting multiple CCTV makes and models on the same system simultaneously provides enhanced flexibility and freedom of choice. Simplifying video search or allowing Access Point control directly from the live video screen provides a wide range of user friendly features. Over the Internet or office LAN, a system user has direct system-wide access to live video, event viewing, history event-based video search and video export functionalities. Custom tailored assignments link individual Access and Monitoring Points to specific cameras across multiple DVRs, providing an ability to set pre- and post-alarm viewing preferences and PTZ shots. Our system provides direct access to CCTV features from the System Status screen, Event Log display and History Report module.

As new CCTV products come to market, our open system architecture allows us to quickly provide integration with features available in these new products

FEATURES INCLUDE:

- LIVE VIDEO ON SCREEN
