

Integra32™ Release Notes

2 Automatic Road, Suite 108
 Brampton, Ontario
 Canada L6S 6K8

Firmware

Access Control

Software	Firmware	iButton	Panel	Comments
3.0-3.4	7. x-9.9		IRC2000-2 IRC2000-3	URC2000 does not work with this software.
3.0-3.4	78-80		IRC2000-4	Downgrade firmware 100+ to version 78 - 80(Mag stripe version is 179).
3.5	100+ 10+		IRC2000-4 URC2000	IRC2000-4 Mag Stripe version is IRCM108U.rbh
3.5+	100+		IRC2000-2 IRC2000-3	These panels require a hardware change to work with this software. A firmware upgrade will not make them compatible.
4.0+	100+ 17+ ELC17+	Yellow	IRC2004+ URC2000 URC2008	Elevator control will only work with software versions 4.0 and up.
3.5+	150+ Chip 150+ Chip 150+ Chip	Blue	IRC2000-5 URC2000-4 URC2008	150+ FW works only with Blue-dot iButton. See the firmware upgrade matrix below for more detail. Elevator control will only work with software R4.0 and up

Upgrade Scenarios

IButton	Firmware version	To Firmware Version	Compatibility
Blue	v150 and higher	v150 or higher	Compatible
Blue	IRC v150 or higher	IRC Firmware 113 or Lower	Not Compatible – All Blue IButtons must be used with 150 firmware and higher
Blue	URC v150 or higher	URC versions 14-20	Not Compatible – All Blue IButtons must be used with 150 firmware and higher
Yellow	v113 or lower	v150 or higher	Not Compatible – All Yellow IButtons must be used with 113 firmware and lower

Alarm Panel Interface

Software	Firmware	Panel	Comments
3.4	SUM22 76+	PC100 IRC2000-2 IRC2000-3	SUM22 firmware is for the Summit panel 3208GLD only.
3.5+	SUM22 BIE23/BIL2 3 105+ 14+	PC100 PC100 IRC2000 URC2000	SUM22 is for the Summit panel 3208GLD only. BIE23 is for the Bosch panel DS7400 and BIL23 is for the Bosch panel DS7400Xi only

Exit Reader Module

Software	Firmware	Panel	Comments
3.5+	107+ 14+	IRC2000-4 URC2000	

IRC

Version IRC78

- Firmware for newer panels (IRC2000-4) so that they can work with software versions R3.4 and earlier.
- The swipe time for Unlock and High Security Privilege has been reduced from ten seconds to three seconds.
- Although this firmware will work in any memory configuration of the panel it will only support 2000 cardholders.

Version IRC79 (IRC179 for Mag Stripe)

- Card number now reported correctly when a link is activated with Grant Access.

Version IRC80

- Input and output links will now execute even when reporting is off.

NOTE: Firmware versions IRC78, IRC79, & IRC80, are only to be used to change IRC2000-4+ boards with Yellow-dot IButton so that they can be used with software versions R3.4 and earlier.

Version IRC103 (02-May-2005)

- Firmware for newer panels (IRC2000-4) with high or extended memory to work with software version R3.5 or higher.

Version IRC105 (06-Sept-2005)

- Firmware upgrade bug has been fixed.

Version IRC106 (07-Sept-2005)

- Timed Antipassback bug has been fixed.

Version IRC107

- Panel's Event Buffer overflow bug has been fixed.
- Exit Reader module supported.

Version IRC108 (IRCM108 for Mag Stripe 22-Sept-2005)

- The reset command is no longer being executed multiple times.

Version IRC109 (IRCM109 for Mag Stripe 12-Dec-2005)

- Minute timer accuracy has been improved.
- Wiegand data collection has been modified.

Version IRC110 (IRCM210 for Mag Stripe 12-June-2006)

- Access point function 'Repeat Ignore Time' has been added.

Version IRC111 (IRCM211 for Mag Stripe 15-Nov-2006)

- Cardholder function 'Link Execute Privilege' has been added.

Version IRC113 (IRCM213 for Mag Stripe 20-Dec-2007)

- Deduct usage now works globally¹.
- The bug related to deduct usage not working properly when PC Decision is ON, is fixed.

Version IRC115 (15-Oct-2008)

- If a door is held open and on an unlock schedule, door was returning to schedule if it is re-locked.

Version IRC116 (09-Mar-2009)

- If RTE not reported, it wasn't executing access granted link, was fixed.

Version IRC116b (08-Nov-2010)

- If RTE not reported, it wasn't executing access granted link, is a feature so the change in FW 116 was reversed.

Version IRC117 (09-June-2011)

- Reporting of RTE on side B was working reverse. If reporting was turned on, it doesn't report and if reporting was turned off, it reports, fixed(This bug was only in FW 116)

NOTE: Off-line operation wasn't working well for IRC FW 114-117. It is recommended to downgrade the FW to 113 if any of your IRC panels have FW 114-117.

Blue-dot IButton IRC Firmware: 150 Series².

NOTES:

- Blue-dot iButtons will work with IRC150, URC150 and higher firmware versions.
- Yellow iButtons will work with IRC firmware versions 100-113 and URC firmware versions 14-20
- IRC150 and higher firmware versions cannot be used with software versions R3.4 or earlier.
- If yours existing software version is R3.4 or lower and you need to add new panels or upgrade existing system, please contact your Sales rep for assistance.

¹ Requires software version 3.7.10R4.0 or higher

² Works with software version 3.5.5R3.5 or higher

Version IRC150 (IRM150 for Mag Stripe 22-Mar-2012)

- Released version of firmware for IRC2000-5 compatible with Blue-dot iButton.

Version IRC151 (14-Mar-2012)

- PC100 offline poll fixed.
- Links involving reader beep were crashing panel, bug fixed.

Version IRC152 (IRM152 for Mag Stripe 31-July-2012)

- Permanent commands not clearing with panel reset command, bug fixed.

Version IRC153 (08-Jan-2013)

- Cardholder file sorting improved
- Improved normally closed circuit operation for RTE
- Changed wake-up test for IButton (Blue)

Version IRC154 (29-July-2013)

- ½ second delay added on handicap door operator output.

Version IRC155 (29-August-2013)

- Access point link causing side B to continuously send access granted event on side A, issue resolved
- Partial download of code reader links clearing Card + Pin schedule on side A, issue resolved.

Version IRC 156 (21-January-2014)

- Card Users are forgiven when Local APB is set for first time or reset.
- Access denied message repeatedly showing on side B of IRC, with Area APB, when card is read on side A, bug fixed.

Version IRM 155 (23-January-2014)

- Card Users are forgiven when Local APB is set for first time or reset.

Version IRC 157 (07-August-2014)

- Cards were getting expired on panel before the Deactivation date for some specific dates only, bug fixed. (Bug originated in FW 156, previous versions had no issue).
- Card access not working for schedule 8, bug fixed.

Version IRC 158 (30-March-2015)

- Clock was occasionally setting wrong on controller, issue fixed.

URC³

Version URC13 (08-Aug-2005)

- Firmware for URC2000 panels to work with software version R3.5 or higher.

Version URC14 (22-Sept-2005)

- The reset command is no longer being executed multiple times.
- Link Execution improved

Version URC15 (15-March-2005)

- Minute timer accuracy has been improved.
- Wiegand data collection has been modified.

Version URC16 (URCM116 for Mag Stripe 22-Nov-2006)

- Cardholder function 'Link Execute Privilege' has been added.

Version URC17 (URCM117 for Mag Stripe 18-April-2007)

- Deduct usage now works globally⁴.
- The bug related to deduct usage not working properly when PC Decision is ON, is fixed.

Version URC18 (Not Released 11-Nov-2007)

- Multiple log messages were introduced.

Version URC19 (15-August-2008)

- Antipassback was missed in URC FW 17, fixed.

Version URC19 A (17-August-2009)

- PE Codes were not showing proper cardholder ID, bug fixed.

Version URC20 (02-Dec-2010)

- A lock command when door was held open in an active unlock schedule was returning to unlock schedule, bug fixed.

Version URC21A (29-Nov. 2012)

- Offline transaction not reported, bug fixed.
- Improved normally closed circuit operation for RTE

³ Works with software version 3.5R3.5 and higher

⁴ Requires software version 3.7.10R4.1 or higher

Blue-dot IButton URC Firmware: 150 Series

Version URC150 (URM150 for Mag Stripe 04-Apr-2012)

- Released version of firmware for URC 2000-4 compatible with Blue-dot iButton.

Version URC151 (URM151 for Mag Stripe 31-July-2012)

- Permanent commands not clearing with panel reset command, bug fixed.

Version URC152B (27-Nov.2012)

- Clearing all inputs, outputs, and Access points states after re-boot.
- Changed wake-up test for IButton(Blue)
- Improved normally closed-circuit operation for RTE

Version URC153A (08-Jan.2013)

- Cardholder file sorting improved

Version URC154I (27-Aug.2013)

- ½ second delay added on handicap door operator output.
- Access point link causing side B to continuously send access granted message on side A, issue resolved.
- Partial download of code reader links clearing card + pin schedule on side A, issue resolved.

Version URC155B (URM-155B for Mag Stripe 23-Jan.2014)

- Card Users are forgiven when Local APB is set for first time or reset.
- Access denied message repeatedly showing on side B of panel with Area APB, when card is read on side A, bug fixed.
- 5 ms delay added to status request to improve communications.
- Version reporting incorrect number of cards for Magstripe version, bug fixed.

Version URC155 (21-Jan.2013)

- Changes made to improve communications.
- Card Users are forgiven when Local APB is set for first time or reset.
- PC decision area antipassback, bug fixed.

Version URC156 (23-May-2013)

- Partial downloads corrupting the schedules, issue resolved.
- Partial downloads corrupting cardholder database issue resolved.

Version URC 157 (07-August-2014)

- Cards were getting expired on panel before the Deactivation date for some specific dates only, bug fixed. (Bug originated in FW 156, previous versions had no issue).
- Card access not working for schedule 8, bug fixed.

Version URC 158 (30-March-2015)

- Clock was occasionally setting wrong on controller, issue fixed.

Version URC 159 (11-Jan-2017)

- Cards weren't getting expired on panel on the Deactivation date, issue resolved.

ELC⁵

Version ELC17 (05-Sept-2005)

- Elevator firmware for Integra32™ system.

Version ELC18 (22-March-2006)

- Minute timer accuracy has been improved.
- Wiegand data collection has been modified.

Version ELC19 (23-Nov-2006)

- Cardholder function 'Link Execute Privilege' has been added.

Version ELC20 (24-Oct-2007)

- Bug Fix; Side "B" unlock time inaccurate below 8 seconds
- Bug Fix; Green LED and buzzer stays on side "B" when alternating card reads occur between "A" and "B" sides.

Version ELC21 (01-Sept-2011)

- Floors unlock schedule fails when offline-bug fixed.

Blue-dot IButton ELV Firmware: 150 Series

Version ELV150KU (05-July-2012)

- Released version of firmware for URC 8000 Elevator panel compatible with Blue-dot iButton.

Version ELV151AU (31-July-2012)

- All inputs, outputs, timers, and access points are cleared when a reset command is sent on Elevator panel.

Version ELV152 (11-Dec-2012)

- Changed wake-up test for IButton (Blue)

Version ELV153 (31-Dec-2012)

- Cardholder files sorting improved.
- Lock floor operator command-bug fixed.

Version ELV154 (4-Apr-2014)

- ½ second delay added on handicap door operator output.
- Cardholders file sorting improved.
- Timed Antipassback is no longer allowed for elevator panel.

⁵ Works with software version 4.0 and higher

Version ELV155 (28-May-2014)

- ½ second delay added on handicap door operator output.
- Unlock schedule for Elevator floor group issues resolved.(Software version 3.8.34 SP27 required)
- Clock lockup at 3:00 A.M. issue resolved.

Version ELV156 (5-Jan-2015)

- Using only one elevator board, after access granted some outputs fail to reset, issue resolved.

Version ELV157 (27-March-2015)

- Clock was occasionally setting wrong on controller, issue fixed.

PC100

Bosch⁶

Version BOS23 (reports version 23)

- PC100 firmware for interfacing a Bosch panel with software version R3.5 or higher.

DSC⁷

Version IRIT3 (reports version 30)

- PC100 firmware for interfacing a DSC IT100 panel with Integra32™ software.

Gardtec/Risco⁸

Version GTX9 (reports version 09)

- PC100 firmware for interfacing a Gardtec alarm panel with Integra32™ software.

Paradox⁹

Version IRP (reports version 70)

- PC100 firmware for interfacing a Paradox alarm panel with Integra32™ software.

Rokonet

Version ROK6 (reports version 06)

- PC100 firmware for interfacing a Rokonet alarm panel with Integra32™ software.

Summit¹⁰

Version SUM22 (reports version 22)

- PC100 firmware for interfacing a Summit 3208GLD panel with software.

6 Works with software version 3.5R3.5 higher

7 Works with software version 3.7.18 R4.1 and higher and Firmware 113+

8 Works with software version 3.6.3 R 4.0 and higher

9 Works with software version 3.7.18 R4.1 and higher and Firmware 113+

10 Works with software version 3.5.2R3.5 and higher.

Software

Release 2.0

- A bug in the Time & Attendance report has been fixed.
- User security has been expanded to include IRC-2000 commands, reports, and the backup module.
- A communications bug has been fixed.
- Communications between panels and the PC has been enhanced.

Release 2.0 SP1

- A bug in the name change of the fields 'More Fields' tab was fixed.
- The Department field not being saved properly has been fixed.
- History report now verifies that end date and time (not just the end time) is later than the start.
- Descriptions have been added to the Integra32 Errors.Log file.
- 'Invalid panel message' message has been added. (Messages with a time or data section of 0 are invalid messages.)
- History report bug fixed. The history report wasn't checking the current history file if the current date wasn't selected for the report.
- Server Alive Message has been added so that the Client can display a message if it hasn't been in contact with the server for a number of minutes.
- The bug causing error "can't find LogHistoryTemp" has been fixed.

Release 3.1

- Global Antipassback has been implemented.
- Global links has been implemented.
- PC Decision has been implemented.
- The Modem setup has been revamped for more consistent operation.
- The super user's privileges have been broken down to allow separate selection of 'Ignore APB', 'High Security' and 'Lock/Unlock'.
- History purge will run with start-up if it hasn't already been run that day.
- Photo Badging has been added.
- DVR interface has been added.
- Video verification has been added.

Release 3.2

- Must have firmware version 72 or higher.
- Multi-Site capability has been added.

- Programmable Event Codes (PECodes) have been added.
- Schedules have been increased to 32.
- Modem call in on 80% buffer full has been fixed.
- A bug in the Reset Area schedule has been fixed.
- Global Antipassback bug for large card numbers has been fixed.
- Badging module has been improved.
- Card format added: Securakey 32-bit.

Release 3.2 SP1

- Bugs related to the Badging Module were fixed.

Release 3.2 SP2

- A bug related to cardholder partial download is fixed.
- The bug related to cardholder window when cards are imported is fixed. (Cardholder window was not refreshing, i.e. the new cards were not showing in the cardholder window if the Integra32Lclient was running while import utility was run.)
- Must have firmware version 73 or higher.
- New Mode 'Inhibit ID' is added for the reader, if turned on, Access granted messages would not display card number.
- 'Verify memory' for the panel will not return any messages.
- The bug related to saving Checking/Unchecking of Interlock for the panel is fixed.

Release 3.2 SP3

- Bugs related to the Time & Attendance Report were fixed.
- Bugs in Code Reader Links were fixed.
- Cardholder partial download bug fixed.
- Remote client connection bugs were fixed.
- Bugs in Time & Attendance Report have been fixed.
- Select button was added to cardholder screen to enter cardholder pictures.

Release 3.2 SP4

- Bugs related to Global Antipassback were fixed.

Release 3.2 SP5

- New card format was added 36-bit CH-16.
- Bugs related to History Archive were fixed.

Release 3.3 SP1 (22-Sep-04)

- Must have firmware version 74 or higher.

- Verify Memory command removed due to changes in firmware 74.
- Two picture fields and two-signature fields are added in Badging.
- DVR messages and reporting of camera number in DVR messages has been added.

- "Euro ATM" format for magnetic stripe cards has been added.

Release 4.0 SP1c [3.6.3] (9-Jun-06)

- A new PC100 type (Gardtec) has been added.

Release 4.0 SP1d [3.6.4] (19-Jun-06)

- A new function has been added to the Access Point, Repeat Ignore Time. This function requires firmware version IRC110.
- 64-bit RBH card format has been added.

Release 4.0 SP1e [3.6.6] (8-Nov-06)

- With LClient and the Import utility both running the partial download now downloads.
- Changes made by the Import utility to the expiry dates are now being updated.
- The panel now shows cardholder status changed by the import utility correctly.
- Card formats 35-bit MOT, 34-bit Passpoint, and 34-bit Passpoint_NP have been added.

Release 4.0 SP2 [3.6.7] (15-Dec-06)

- Card format 40-bit GE has been added.
- A bug caused by 'Alarms' not being cleared on the day they happen has been fixed.

RELEASE 4.1

Release 4.1 [3.7.1] (16-Jan-07)

- Cardholder function 'Link Execute Privilege' has been added to provide both a 3-swipe and a 5-swipe link execute command.
- The Integra server now runs as a service and is therefore always running.
 - You are not required to restart the server when you, change/add/delete any network/panel properties.
 - The first user entering the system selects the site that is logged onto. The name of the logged-on site will be displayed on the status bar. Changing sites will require the restarting of the server service.
 - Refresh buttons have been added in Configuration (treeview) to reload changes made (items added) by other operators.
- High Security On and High Security Off have been added to both local and global links.
- A new network feature has been added: Time Zone Difference.
- Card copy feature has been added.
- Finger Prints can be enrolled for verification.

Release 4.1 [3.7.2] SP1a (7-Mar-07)

- PC100 type 'Gardtec' has been renamed to Risco Group.
- TCP Finger Print reader capability has been added.

Release 4.1 [3.7.2] SP1b (30-Mar-07)

- Import utility can now import data from an SQL database.

Release 4.1 [3.7.3] SP1c (27-Apr-07)

- Partial download for Risco Group PC100 has been fixed.
- Keypad links error with inputs and outputs has been fixed.
- A carriage return has been added to end of every ASCII message.
- PC100 links' bug has been fixed.

Release 4.1 [3.7.4] SP1d (24-May-07)

- Added card format "32-bit EXI".

Release 4.1 [3.7.6] SP2 (11-Jul-07)

- Visitor Manager has been added.
- Ignore void card has been added to cardholder.
- Upgrade was causing "Invalid password" error for multiple sites, now fixed.
- 40-bit AWID Automotive format added.

- 34-bit Mifare/SN-NP format added.
