

# Integra 32™ SOFTWARE MODULES

## Card Import Utility - IMP

### What is the Import Utility?

Integra32 Import Utility is a built in integration tool that allows data to flow seamlessly into the Integra32 system . It is used to Integrate with any third party database to pull data on a one time or scheduled basis. Cardholder records can be updated, added or deleted and status can be changed from active to inactive. The import utility also automatically downloads credentials to the appropriate controllers for a realtime card interface to door access.

This tool is also excellent for migrating data from an old Access Control system into the Integra system, reducing card holder programming time from hours to seconds.

### Features Include:

- One Time Import
- Automatic Scheduled Import
- Integrate with Any Database
- Update cardholders •
- Activate/Deactivate Cards •
- Update Access Levels •
