# AxiomV™ SOFTWARE MODULES

Card Import / Export Utility - IMP

What is the Import/Export Utility?

AxiomV Import/Export Utility is a built-in integration tool that allows data to flow seamlessly into and out of the AxiomV system. It is used to Integrate with any database, including Active Directory, to pull data on a one time or scheduled basis. Cardholder records can be updated, added, or deleted and status can be changed from active to inactive. An unlimited number of fields can be added to the database so that third party data can be included in AxiomV.

The import utility also automatically downloads credentials to the appropriate controllers for a realtime card interface to door access.

Features Include:

- One Time Import
- Automatic Scheduled Import
- Integrate with Any Database
- Active Directory Integration

- Update cardholders
- Activate/Deactivate Cards
- Update Access Levels
- Create and Update Any Additional User Field
