AxiomV™ SOFTWARE MODULES

## OLE for Process Control - OPC

What is OPC?

The acronym "OPC" comes from "OLE (Object Linking and Embedding) for Process Control. The OPC module is an add-on to the AxiomV platform that allows third party software using the OPC compliant protocol standard to connect to AxiomV. This universal connection allows any third party the ability to perform complete monitoring of AxiomV and Control any AxiomV device including Access Points, Inputs and Outputs.

Why should you use OPC?

OPC gives multiple applications of Security, Building Automation and People Management access to real-time information in a consistent manner, making multi-vendor interoperability and "plug and play" connectivity a reality. This creates a harmony and symbiotic relationship within a building for a real and beneficial efficiency.

OPC Benefits

OPC removes barriers seen in proprietary systems allowing a reduction in installation and inter-operability costs.

AxiomV and OPC

The AxiomV OPC add on module seamlessly installs in seconds on your AxiomV server. Just point the OPC client to the AxiomV OPC server and it's ready to save you time and money!
